**Key words.** stars: abundances – Galaxy: evolution – Galaxy: stellar content – Galaxies: star formation – errata, addenda

This erratum corrects a few typographical errors in the coordinates of some of our metal-poor stars.

**Table 1.** Log of observations. The exposure times are given for the blue and red arms of UVES.

**Notes.** The signal-to-noise ratios are measured at 4000 Å (with the exception of Scl07-050, for which S/N per pixel was measured at 4500 Å), 5300 Å, and 6300 Å. The metallicity estimates are derived from CaT or from an HET/HRS spectrum in the case of Sex24-72.
